

Think Solar Protection for Your Home

SOLAR • SECURITY • STORM

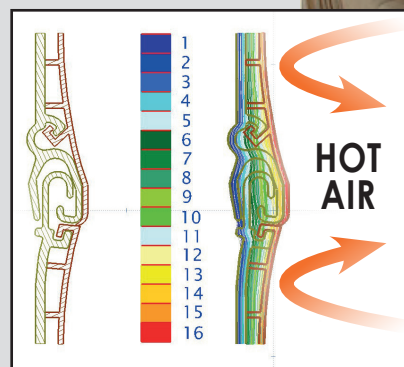

Our thermally broken & insulated roll down shutters keep the heat out of your home, offer exceptional security and peace of mind during a hurricane.

SOLAR PROTECTION

Hurricane approved dual slats work together to protect your home from hurricanes and keep your home cooler all year.

The outside layer is made of high-impact polymer while the inside layer is composed of structural, high-strength aluminum creating a thermally broken design to stop the transfer of heat.

Patent-Pending Features!*

SECURITY & STORM

GreenTek Rolling Shutters double as security and storm protection. They are held together by a combination of sidelocks that attach to the shutter curtain and **high security rails** that prevent the slats from being pulled out under high pressure.

Snap covers — **not accessible to outsiders** — are utilized to conceal all fastening hardware. State of the art end-retention shutter featuring the most compact housing sizes of its kind.

The patented dual slat design results in significant sound reduction keeping outside noises from entering your home.

Enjoy total peace of mind with these one-of-a-kind rolling shutters.
