Engineered To Be The Best

ULTRA SCREEN-X2 PLUS

Versatile And Easy To Construct Even On Location!

What makes the UltraScreen X2 the strongest screen on the market?

UltraScreen X2 is made of a unique two-ply construction. Similar to the way plywood gets its strength, our two-ply layering system more than doubles the strength compared to other single-ply fabrics. This results in less deflection, and more than two times the strength compared to other storm fabrics.

What are the various options for mounting the fabric?

Constructing the fabric is easy, cost effective and allows for many different types of applications. There are two options for mounting the fabric with or without the use of a fully automatic Bartack sewing machine. There are four brackets that require no sewing. Some can be used in conjunction with a buckle and other hardware. The sewing option gives greater variability in the type of buckle and method of attachment used. It can also be more cost effective. Other methods allow for direct mounting or strap method. Zip Disks enhance finished product.

Buckle

Zip Disk

Mounting Options: Sewing or No Sewing

No sew options: these four brackets do not require sewing for installation.

X Bracket

Strap-Connector
Bracket

Grommet

L Bracket - 90 Degree

These brackets are faster and less expensive to install. Some fully automatic Bartack sewing required.

90 Degree Bracket
